

The IEEE ICMA 2022 Conference will be held online using Zoom software. You can follow next steps to join the IEEE ICMA 2022 online Conference:

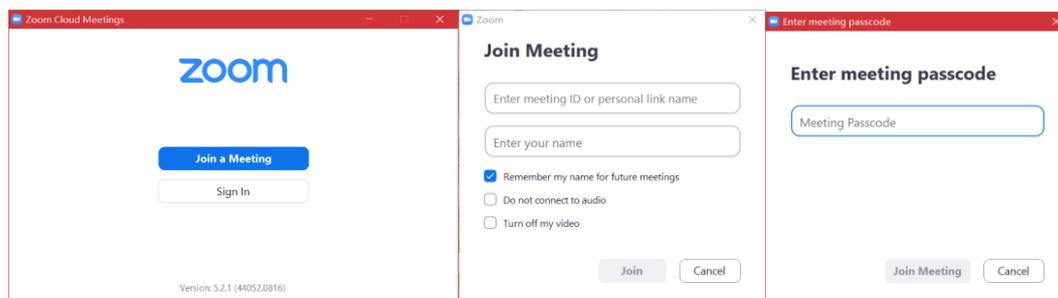

### Step 1: Install the Zoom client.

Download URL: [https://zoom.us/download#client\\_4meeting](https://zoom.us/download#client_4meeting)

### Step 2: Launch Zoom software and join the Conference.

After launching Zoom software, please click **Sign In** if you already have an account. You can click **Join a Meeting** to attend as a visitor without signing in. (For authors in the Mainland of China, you can join a meeting as a visitor and don't need to create an account.)

1. IEEE ICMA 2022 online Conference has 7 online meeting rooms. You can find the Conference Room ID and meeting passcode by clicking <http://2022.ieee-icma.org/pagefiles/ICMA2022RoomLink.pdf>.

2. When you join the room meeting, you need to modify your display name by following the format:

- If you are a staff member, please use “real name-Staff”.  
e.g., Bart Simpson-Staff
- If you are a session chair, please use “real name-Session Chair”.  
e.g., Bart Simpson-Session Chair
- If you are an oral speaker in this session, please use “real name-Session Name (Presentation Number)”.  
e.g., Bart Simpson -TP1-6(2)

The “Session Name (Presentation Number)” can be found in

<http://2022.ieee-icma.org/pagefiles/Program/ICMA2022DIGEST.pdf>.

*IEEE ICMA 2022 Conference Digest*  
**TP1-6: Modeling, Simulation Techniques and Methodologies (VI)**

Session Chairs: Sheng Cao, Beijing Institute of Technology  
Jin Guo, Beijing Institute of Technology

**Online Conference Room 6, UTC+8(Beijing Time): 13:30 - 15:00, Tuesday, 9 August 2022**

TP1-6(1) 13:30 - 13:45

**Hydrodynamics Simulation of a Three-dimensional Self-propelled Bionic Manta**

Pengxiao Bao<sup>1,2</sup>, Liwei Shi<sup>1,2\*</sup>, Shuxiang Guo<sup>1,2,3</sup>

- A three-dimensional self-propelled manta is simulated through ANSYS Fluent.
- The pressure contour and the Reverse Karman Vortex is observed and analysed through one self-propelled cycle.
- The whole work qualitatively analyse the undulatory process of manta and discuss about the manta propulsion mechanism.

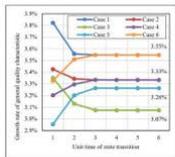

TP1-6(2) 13:45 - 14:00

**Generation Mode Analysis of General Quality Characteristic of Ship Power System**

Peng Shang, Yanhua Sun, Tonglong Peng, Yuan Lin, Zechong Liu, Nieyong Huang and Jian Zhou  
School of Mechanical Engineering, Xi'an Jiaotong University  
Shaanxi, China

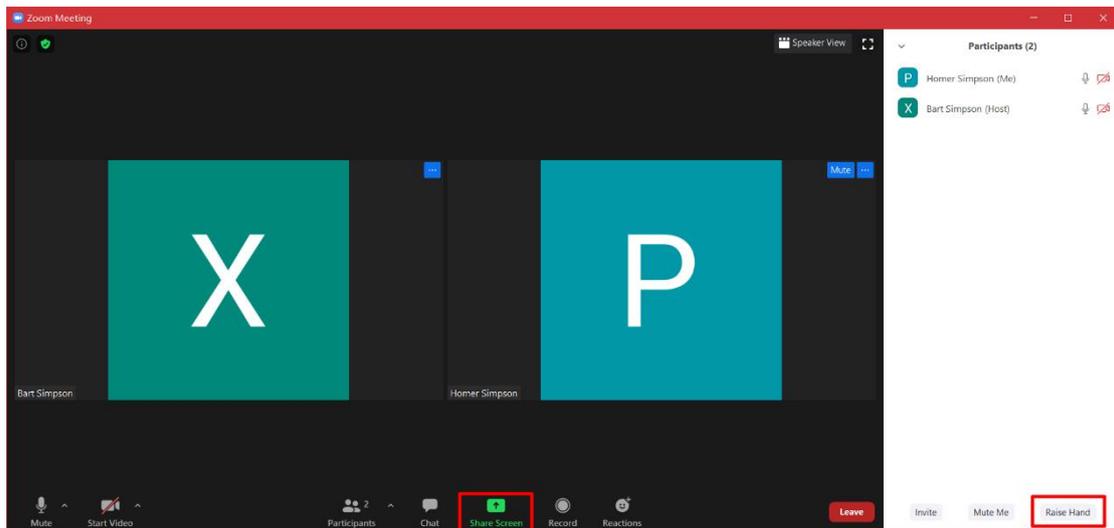

- A quantitative assessment model is established based on fuzzy mathematics theory and Markov stochastic process for analyzing the general quality characteristic of the ship power system.
- The sensitivity of the general quality characteristic to the six influence factors varies.

- If you are an audience, please use “real name-Audience”.  
e.g., Bart Simpson-Audience

### Step 3: Start your oral speech and Q/A.

If you are an oral speaker, you can use “Share Screen” to show your Powerpoint and make your presentation for 12 minutes. In Q/A (3 minutes), the listeners can click “**Raise Hand**” to ask questions.

\* When join the Conference meeting, everyone will be muted except the oral speaker.

### Important Notes:

Each speaker has 15 minutes in total, including 12 minutes for presentation and 3 minutes for Q/A. Please get ready for your presentation in advance, the timekeeper will be activated once you start to share your screen.
